

# Verifone UX series

Robust, modular unattended terminal

## Introduction

The UX series is the high caliber unattended terminal for the most harsh environments.

The UX series consists of a EMV/magstripe reader, a keypad and an optional contactless module. It connects through USB, serial or ethernet to a Windows POS running the Adyen Windows library.

The UX series will be fully part of Adyen's omni-channel offering. It will be supported by Adyen's Windows library, use point-to-point encryption, be capable of DCC, cross-channel and cross-country refunds, shopper recognition, in-transaction loyalty and other advanced cross-channel use cases. It will be pre-certified with Adyen acquiring and ready for deployment in all European countries and the US through a single integration.

## Specifications
